

Carton Clamp Attachments

Carton Clamp Attachments - The Carton Clamp is actually one of the most useful forklift additional parts, used to handle lots of unsecured objects on a pallet like appliances, furniture, canned goods or frozen cartons. Large rubber pads carefully squeeze both sides of the load, gently carrying it up to transport it to its next place. Carton Clamps were specifically designed to be used in the electronics, beverage, appliance and warehousing businesses. Industries who make use of these clamps save a lot of money since they don't need to acquire, maintain, store or ship pallets. Carton Clamps allow for pallet free handling, significantly saving a lot of warehouse space.

Side-shifting is actually amongst the typical features on all Carton Clamps. This would allow precise alignment to be achieved during load position. Close stacking of the load is maintained due to the slim arm design and the turning pads made of aluminum. The close stacking gets rid of unnecessary spaces amid rows of stock and further space is acquired as all the expensive pallets are also eliminated.
