

Carriage Roller

Carriage Rollers - Carriage rollers are especially designed bearings that are used on lift masts so as to help them work in challenging environmental surroundings. Lift masts are often subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences such as heat, dust, cold, moisture, contamination and aggressive ambient air. Hence, the guidance arrangements of lift masts should be specifically tough and have a specific high load carrying capacity.

To be able to help compete in numerous different environmental conditions, carriage rollers were designed for a lot of lift masts. While having the ability to handle a particularly high load carrying capacity, these bearings provided a cost-effective operational security for the guidance arrangement of the lift masts.
